ZYLINC MOBILE PRESENCE

Zylinc Mobile Presence increases the efficiency of Skype for Business for companies with mobile users.

Zylinc Mobile Presence enables you to see the availability of all employees, even on their mobile phones.

This way, communication within the company is faster and easier and you will always know if your colleagues are available.

■ Features

Status description changes to "Mobile busy" or "Cisco busy", if the telephone is in use.
Status is automatically updated when the conversation ends.

In the status description you can quickly view if someone is busy on their mobile phone.

Status description may include identity of the other caller (if the mobile provider supports that function - can be deactivated).

Zylinc Mobile Presence is displayed in SharePoint, Outlook and other systems, supporting Lync and Skype for Business status.

Requires mobile status subscription with your mobile service provider.

■ Full integration

Zylinc Mobile Presence integrates with other Zylinc applications. Together, these products form a comprehensive overview of all employees' availability.
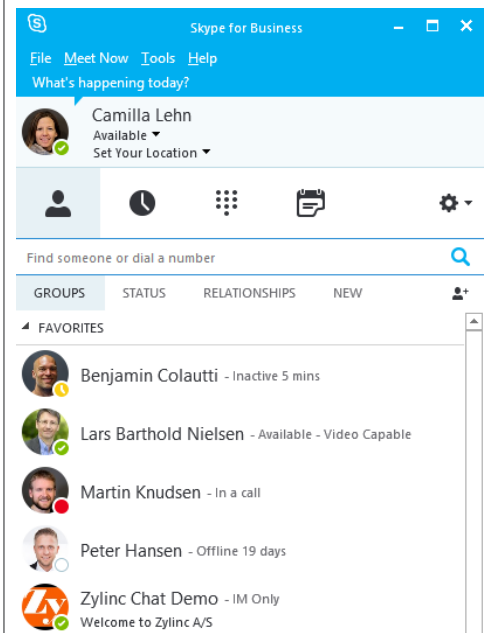

■ Collaboration

 "At Microsoft we are looking forward to continue the exciting collaboration and sparring with Zylinc. In this way we can ensure our mutual customers the greatest possible value of their investment in Microsoft Unified Communications".

Kenneth Pawlak, Solution Sales Professional UC, Microsoft Denmak
